

Réseau express métropolitain construction

The largest public transit project in Quebec in the past 50 years

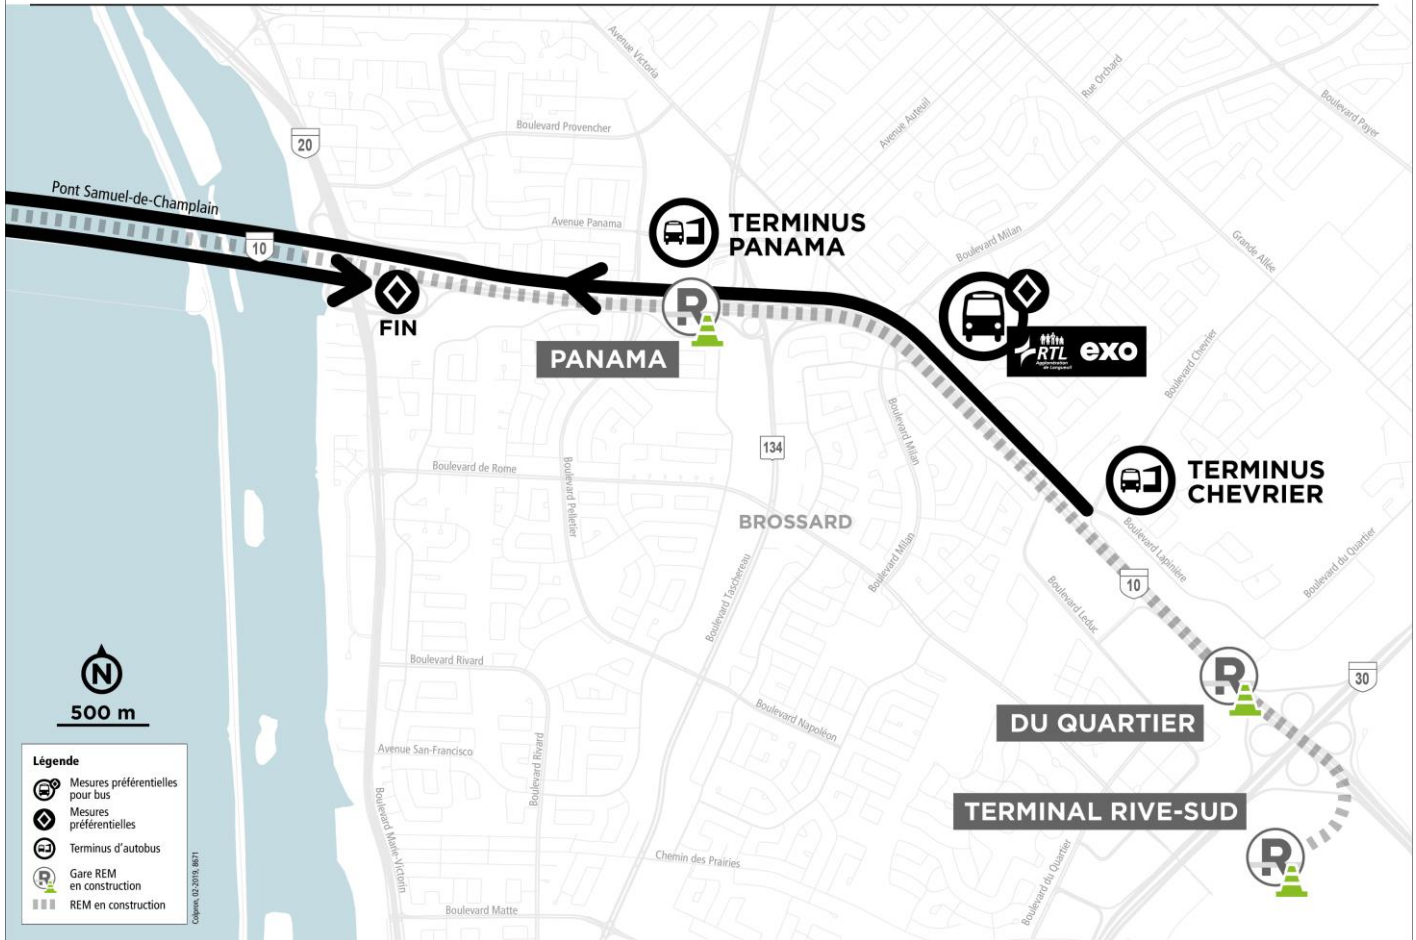

South Shore sector

The arrival of an automated, light rail transit system on the South Shore will significantly increase public transit capacity between downtown Montréal and the South Shore, facilitate connections with other transit networks including three métro connections, and offer a quicker route on a daily basis. Completing the Réseau express métropolitain (REM) in your area will require major construction work in the coming years. **During that time, a reserved bus lane will be maintained at all times, but its location will be shifted around, according to construction needs.**

Here are the specific measures taken and estimated travel times:

SECTEUR RIVE-SUD : 2019 à 2021
(Navette autobus - Mesures préférentielles pour bus)

Please visit rem.info to monitor the different work phases and measures implemented.
